EDUCATION

Kean University

Bachelor of Science in Computer Science, Focus in Cybersecurity

Union, NJ

September 2020 – May 2024

EXPERIENCE

Computer Programming Instructor

The Coder School

April 2022 – Present

Short Hills, NJ

- Adapted project-based lessons to teach computer programming and robotics to students aged 10-18
- Authored detailed technical documentation to track student progress and ensure learning goals were met
- Facilitated problem-solving and collaboration skills through coding challenges and team projects
- Introduced coding concepts through engaging tools, enhancing student understanding and retention

Student Assistant Web Administrator

Kean University, University Relations

September 2022 – May 2024

Union, NJ

- Maintained Kean's web presence, ensuring the integrity of information for re-accreditation standards
- Resolved accessibility issues and updated web content using Drupal CMS to improve user experience
- Collaborated with cross-functional teams to recommend optimal solutions for web-based projects
- Audited website components for compliance with UI/UX best practices, increasing site accessibility

Software Engineering Intern

Modo Labs

June 2022 – August 2022

Cambridge, MA

- Designed AWS Lambda modules to integrate real-time REST API data into Modo's app platform
- Developed a full-stack prototype app using Node.js and AWS DynamoDB to analyze and visualize data
- Implemented user-friendly front-end features within Modo Labs' design system for seamless interaction
- Delivered innovative solutions to streamline data insights, improving app functionality and usability

PROJECTS

Ubuntu Server | *Ubuntu, Docker, Netplan*

January 2023 – Present

- Configured and managed a personal Ubuntu server to practice advanced system administration
- Deployed web hosting services with Apache and NGINX, using MariaDB for database management
- Automated disk mounting and implemented encrypted storage to enhance security and reliability
- Utilized Docker and LXC for containerized environments and Netplan to optimize network settings

Sorting Algorithm Visualizer | *ReactJS, ChatGPT 3.5 API* | [Repository Link](#)

June 2023 – Present

- Built a full-stack application with ReactJS to visualize sorting algorithms for interactive learning
- Integrated ChatGPT 3.5 API to provide explanations and answer questions on sorting topics
- Enhanced engagement with dynamic visualizations for sorting algorithm concepts

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, HTML, CSS, SQL

Frameworks: ReactJS, Django, Node.js, Express.js, Tailwind CSS, Bootstrap

Developer Tools: Docker, Git, PostgreSQL, MongoDB, MariaDB, AWS Lambda, DynamoDB, Vite, Netplan, UFW, LXC, KVM/QEMU, Celery, Redis
